

LOW PROFILE CABLE CONNECTOR WITH HYBRID LATCH

ABSTRACT OF THE DISCLOSURE

A low profile cable connector includes a mating connector face, and first and second lateral sides extending from said mating connector face. One of the first and second sides comprises a bail latch retainer thereon, and a jack screw latch is located adjacent the other of said first and second sides. The cable exit extends from one of the first and second sides at an angle to the mating connector face. The bail latch retainer comprises a bail latch slot, and the jack screw extends through a top surface of the connector. The connector is defined by first and second backshells joined to one another.
